## Certificate of Analysis

**PRODUCT: Anti human Pregnane X receptor 2(PXR-2)  
mouse monoclonal antibody**

**CATALOG:** PP-H0502-00

**LOT #:** A-2

**Concentration:** 1 mg/ml

**Amount:** 100 micro gram

**Volume:** 100 micro L

**Buffer:** Physiological saline with 0.1% NaN<sub>3</sub> as a preservative

**Antigen:** human PXR-2 (1-78 a.a.) expressed on baculovirus

**Isotype:** Mouse G2b

**Purification Method:** Ammonium sulfate fractionation

**Tested Applications:** Western Blot

**Storage conditions:** Store at +4°C short term (1-4 weeks),  
at -20°C or less long term.

Stable for 12months at -20°C

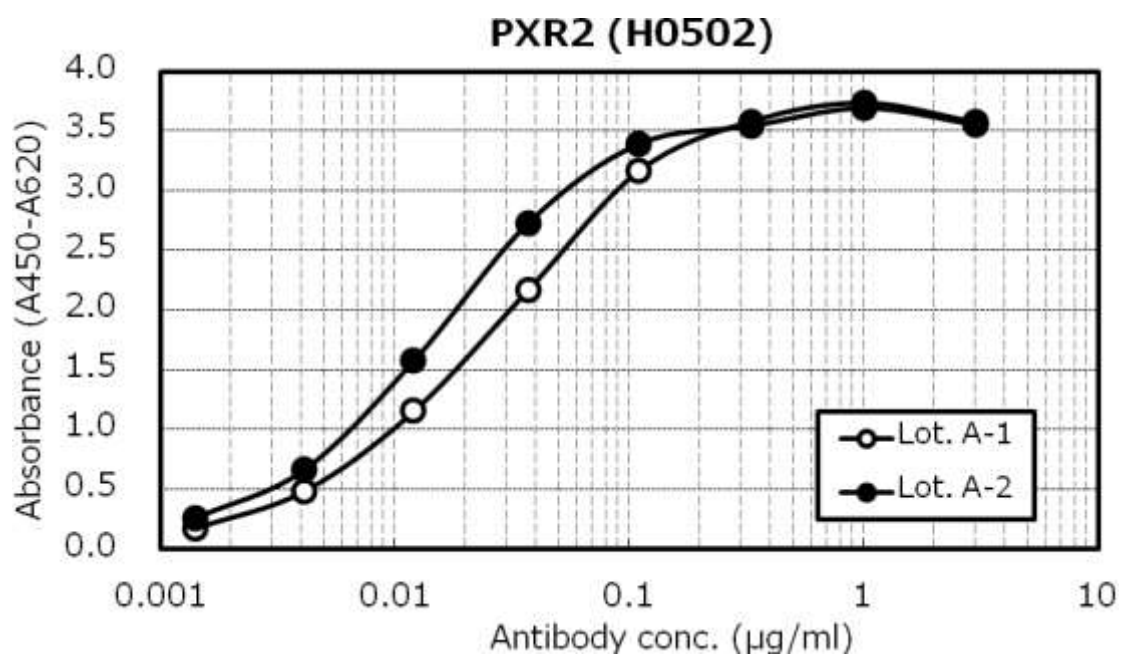

Avoid freeze / thaw cycle.

*Optimal dilutions should be determined by each laboratory for each application.  
Intended for Research Use Only. Not for use in Diagnostic Procedures.*

**Validation Data**

Method: Each 1 micro gram per well of antigen was coated on an ELISA plate for overnight at 4°C. Blocking with non-fat dry milk incubated for one hour at room temperature. After washing plate, Serial diluted antibody solution was loaded on each well at room temperature. Washed Plate was incubated with HRP conjugated anti-mouse IgG (Amersham, 1:15,000), then washed and visualized with TMB reagent.

Result: Lot A-2 is evaluated as the same reactivity with old Lot A-1.

antibody conc. (ng/ml)	n = 2	
	Lot No.	
	A-1	A-2
1	0.182	0.261
4	0.493	0.668
12	1.160	1.577
37	2.173	2.731
111	3.169	3.393
333	3.582	3.543
1000	3.735	3.692
3000	3.574	3.555
